Science in Action at Eldorado

Mrs. Hickman and Mrs. Huska's fifth grade classes are very excited to be working their way through "Whoops! Unexpected Discoveries in Chemical Engineering" as part of the Grade 5 Chemistry unit. This is a brand new science crate from Science Alberta Foundation, a non-profit, charitable organization whose mission is "To be a global leader in the development of science literacy enabling all to excel in a global society." The materials included in the crate allow students a variety of hands-on experiences that further understanding of the concepts being studied as evidenced in the following photographs.

Eldorado students Darrian, Diana and Tylor learn about the physical and chemical changes that happen when you chew your food.

Dalton and Austin attempt to separate two materials in a mixture.

Ethan, Brooke and Taylor use Archimedes principle to determine if the crown is real gold.

Mrs. Hickman and Mrs. Huska would like to thank Conoco-Phillips and APEGGA for their support of this very worthwhile endeavour.
